

SWIFIX Fixings

An Innovative range of fixings for refitting items through **external** and **solid wall insulation** systems

#FollowTheBear

The perfect fixings for external and solid wall insulation

The Swifix range of products has been specifically designed and engineered for refitting and installing items through external wall insulation (EWI) and solid wall insulation (SWI) systems. This can be either at the same time the system is being installed or post installation.

Redefining best practice

All products in the range provide a cost effective and maintenance free solution for fixing items back through the EWI/SWI system whilst also ensuring the insulation system remains intact and undisturbed. The current standard practice relies on the use of timber for re-fixing external items back through the EWI/SWI system. However, this method can contribute to cold spots and can disturb the continuous insulation characteristics which could create performance issues for the system. The other potential issue with this method is the longer term degradation of the timber within the EWI/SWI system.

Proven technical capabilities

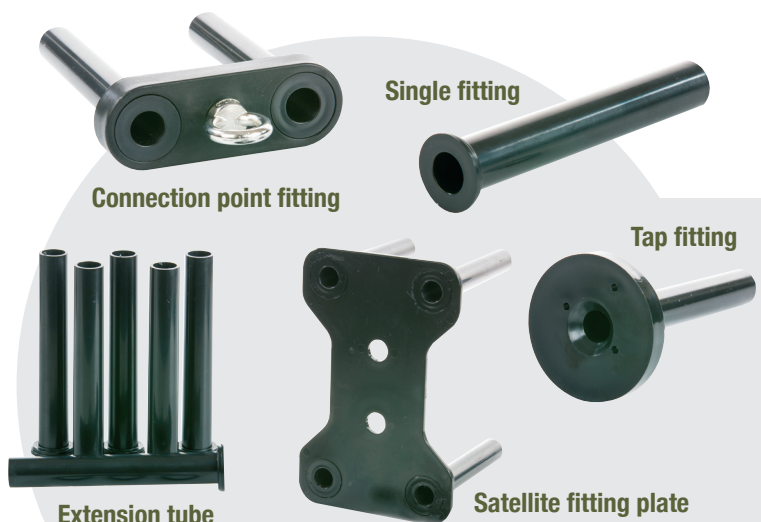

Manufactured from high quality plastics, the fixings have been designed to provide a more aesthetically pleasing appearance to enhance and compliment the new property exterior. The fixings have been tested by the BRE (British Research Establishment) for strength, compression and load and were found to perform as required. The fixings also comply with the required technical aspects reducing the risk of future water penetration into the EWI/SWI system.

The range's technical capabilities are proven and offer a more cost effective solution than the traditional method. The financial benefits are two-fold, firstly the fixings are more cost effective than the traditional timber practice and secondly, since the fixings avoid cold spots and are conducive to continuous insulation, the thermal efficiency of the buildings is maintained, thus ensuring reduced heating bills for owners and occupiers.

Versatile fixing solution

The product range can be used for fitting pretty much anything including satellite dishes, down pipes, washing lines, hanging baskets, fence and gate posts, BT boxes and canopies. All products are manufactured in black and white as standard, however other finishes are available to order to compliment the finished render; please get in touch with us to discuss your specific requirements.

The Swifix range ensures that your investment is protected providing long term peace of mind that the product will continue to perform as required and ensure that any system guarantees or warranties remain unaffected. Swifix fixings have also secured the approval of a number of EWI/SWI system manufacturers, distributors and installers.

SWIFIX BENEFITS

- Significant reduction in labour costs for enabling
- Reduced programme time
- Increasing surface area of insulation
- Reducing risk of cold spots
- No lost timber grounds
- Durable, high quality plastics
- Used for retrofitting and maintenance
- Protecting guarantees and warranties
- Resistant to water penetration

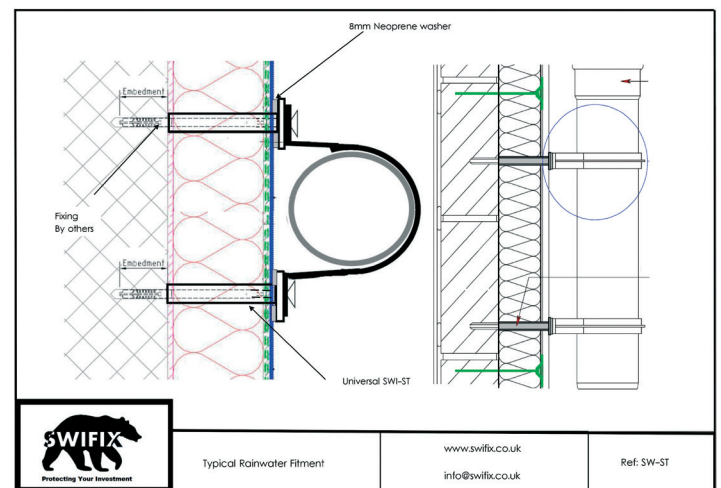

Maintenance solution

In order to maintain warranties and guarantees issued on completion of the installation, it is essential that any future requirement for fixing items through the insulation system are installed correctly, by using the appropriate approved fixings for the installation.

All fixings are available direct from SWIFIX Ltd and from various distributors and builders merchants throughout the UK. If you don't see what you need on the website please call as we may be able to provide bespoke items to cater for every product that needs installing.

Design & technical support

We provide full design and technical support for your project requirements and work with you to ensure the appropriate fixings are chosen to suit the application. We can also provide on-site support as well as product and installer training.

CONTACT US

For further information please visit www.swifix.co.uk or email us at info@swifix.co.uk or call us on 01884 560477 so that we can ensure you get the correct fixing for the application. For further peace of mind we can send one of our installers to fit items required to ensure guarantees and warranties remain unaffected.
